

About Glovill Foundation :

GloVill Foundation is a not for profit organisation incorporated under Sec 8 with the Ministry of Corporate Affairs (MCA) ,Government of India working for the Economic Development of Indian Villages .

Some of the Objectives :

- To Reinvent and Rebuild the Village Ecosystem ,One Village at a Time
- To meet the Sustainable Development Goals set by UN
- To contribute for AtmaNirbhar Bharat

At **Glovill Foundation** , we are committed to transforming the Village Ecosystem (Rebuilding and Reinventing) with **innovative approaches ,ideas and initiatives** . To achieve the above concept ,first and foremost ,we are planning to transform the fundamentals and roots of a Village which is “**Agriculture and Allied activities**” which plays a key role in Village Economics and Development by involving **the educated Youth** but gone are the days when farmer should depend only on Agriculture and allied activities for Income and this is where Glovill Foundation would like to discuss ideas to collaborate with interested IT /ITES companies to transform Agriculture by involving Tech Savvy Youth for the “**Skilling & Tilling Program**”

Objective of Skilling & Tilling Program :

Objective of this program is to involve the educated youth especially from IT background to try and test a designed module that involves both skilling in IT and tilling in Agriculture (**farming activities**) by staying in a Village .

Eg.. Training the youth who completed BTech/BE with required IT skills wherein they themselves can design the required IT Platform which will help their farmers (their parents) at Village/Mandal level

Impact on the Ecosystem :

- This project can bring-in new energy /ideas towards transforming Agriculture because of Youth Involvement
- This project can stop the migration of educated Youth to cities for Job Search
- This project can contribute for Village Economy (Increasing the income levels)
- This project can help startups especially those that are working in rural areas to penetrate their services /products
- Agri-Techs can hugely benefit from this project because they need demo farmers who can test their service /product (Youth are the ready to take action)

How will Glovill Foundation support the partner in this initiative :

- We would like to create awareness among the Youth about the this program in a targeted area (Our Mandal for the pilot project)
- We will coordinate with the stakeholders (Govt) for necessary infrastructure required for the implementation of the program
- Coordinate with an interested Partner company (IT/ITes) to execute at ground level right from designing to implementation of the program.
- We will provide a required monthly stipend for the youth who will be part of this project.
